

Experiment3: Car Booking Reservation System using SaaS

Aim

To develop a **Cloud-Based Car Booking Reservation System** using a Cloud Service Provider (such as **Zoho Creator, Google AppSheet, Microsoft Power Apps, or Salesforce**) to demonstrate the **Software as a Service (SaaS)** model. The application enables users to register customers, manage car details, reserve cars, track bookings, and generate reports through a secure cloud-based platform.

Procedure

1. Sign in to a cloud platform (e.g., Zoho Creator).
 2. Create a new application named **Car Booking Reservation System**.
 3. Design forms for Customers, Cars, and Bookings.
 4. Add car details such as model, registration number, seating capacity, rental price, and availability.
 5. Create a customer registration form.
 6. Develop a booking form for reserving cars.
 7. Configure workflows to automatically generate Booking IDs and update car availability after booking.
 8. Create reports to display available cars, booked cars, customer details, and booking history.
 9. Test the application with sample customer and car records.
 10. Deploy the application on the cloud and access it through a web browser.
-

Implementation

Step 1: Create the Application

- Log in to the cloud platform.
 - Create a new application named **Car Booking Reservation System**.
-

Step 2: Create Forms

Customer Form

Fields:

- Customer ID
 - Customer Name
 - Mobile Number
 - Email Address
 - Driving License Number
-

Car Form

Fields:

- Car ID
- Car Model
- Registration Number
- Car Type (Hatchback, Sedan, SUV)
- Seating Capacity
- Rental Price (Per Day)
- Availability Status

Booking Form

Fields:

- Booking ID
 - Customer Name (Lookup)
 - Car Model (Lookup)
 - Booking Date
 - Pickup Date
 - Return Date
 - Total Rental Cost
 - Payment Status
 - Booking Status
-

Step 3: Add Automation

- Automatically generate Booking IDs.
 - Calculate the total rental cost based on the number of rental days.
 - Update the car status to **Booked** after confirmation.
 - Restore the car status to **Available** after the return date.
 - Display booking confirmation.
-

Step 4: Create Reports

Generate reports for:

- Available Cars
- Booked Cars
- Customer Details
- Booking History

- Rental Revenue Report
 - Active Reservations
-

Step 5: Test the Application

- Add sample cars to the database.
 - Register customers.
 - Reserve a car.
 - Verify that the selected car becomes unavailable after booking.
 - Check booking confirmation and generated reports.
-

Result

A **Cloud-Based Car Booking Reservation System** was successfully developed using a **Software as a Service (SaaS)** cloud platform. The application enables customers to reserve cars online, allows administrators to manage vehicle availability and customer records, and generates booking reports. The system demonstrates the SaaS model by providing centralized cloud storage, secure online access, automated booking workflows, real-time updates, and efficient reservation management.
