

Exp no 1 :Create a simple cloud software application for Flight Reservation System using any Cloud Service Provider to demonstrate SaaS

Experiment: Flight Reservation System using SaaS (Cloud Service Provider)

Aim

To develop a **Cloud-Based Flight Reservation System using a Cloud Service Provider (e.g., Zoho Creator, Google AppSheet, Microsoft Power Apps, or Salesforce)** that demonstrates the **Software as a Service (SaaS)** model by enabling users to search flights, book tickets, manage passenger details, and view reservation records through a web-based cloud platform.

Procedure

1. Sign in to a cloud platform (e.g., Zoho Creator).
2. Create a new Flight Reservation System application.
3. Design forms for:
 - Passenger Details
 - Flight Details
 - Reservation Details
4. Add fields such as Passenger Name, Flight Number, Source, Destination, Date, Seat Class, and Ticket Status.
5. Create relationships between passenger and flight records.
6. Develop a booking form to reserve seats.
7. Configure workflows to automatically generate Booking IDs and confirm reservations.
8. Create reports to display booked tickets and reservation history.
9. Test the application by making sample flight reservations.
10. Deploy the application on the cloud and access it through a web browser.

Implementation

Step 1: Create the Application

- Log in to the cloud platform.
- Create a new application named **Flight Reservation System**.

Step 2: Create Forms

Passenger Form

Fields:

- Passenger ID
- Passenger Name
- Age
- Gender
- Mobile Number
- Email

Flight Form

Fields:

- Flight Number
- Airline Name
- Source
- Destination
- Departure Time
- Arrival Time
- Available Seats
- Ticket Price

Reservation Form

Fields:

- Reservation ID
- Passenger Name (Lookup)
- Flight Number (Lookup)
- Travel Date
- Seat Class
- Number of Tickets
- Total Fare
- Booking Status

Step 3: Add Automation

- Automatically generate Reservation ID.
- Calculate Total Fare.
- Reduce available seats after booking.

- Display booking confirmation.

Step 4: Create Reports

Generate reports for:

- Passenger List
- Flight Schedule
- Booking History
- Available Flights
- Confirmed Reservations

Step 5: Test the Application

- Register passengers.
- Book tickets.
- Verify booking confirmation.
- Check generated reports.

Result

A **Cloud-Based Flight Reservation System** was successfully developed using a **Software as a Service (SaaS)** cloud platform. The application allows users to register passengers, search available flights, reserve tickets, manage booking information, and generate reservation reports through a secure cloud-based interface. The system demonstrates the SaaS model by providing online accessibility, centralized data storage, real-time updates, and simplified reservation management.
