

5. Product Selling System using SaaS

Aim

To develop a **Cloud-Based Product Selling System** using a Cloud Service Provider (such as **Zoho Creator, Google AppSheet, Microsoft Power Apps, or Salesforce**) to demonstrate the **Software as a Service (SaaS)** model. The application enables customers to browse products, place orders, manage inventory, and track sales through a secure cloud-based platform.

Procedure

1. Sign in to a cloud platform (e.g., Zoho Creator).
 2. Create a new application named **Product Selling System**.
 3. Design forms for Products, Customers, and Orders.
 4. Add product details such as product name, category, price, stock quantity, and availability.
 5. Create a customer registration form.
 6. Develop an order form for purchasing products.
 7. Configure workflows to automatically generate Order IDs and update stock after each sale.
 8. Create reports for products, customers, orders, and sales.
 9. Test the application using sample products and customer orders.
 10. Deploy the application on the cloud for online access.
-

Implementation

Step 1: Create the Application

- Log in to the cloud platform.
- Create a new application named **Product Selling System**.

Step 2: Create Forms

Product Form

Fields:

- Product ID
- Product Name
- Category
- Price
- Stock Quantity
- Availability Status

Customer Form

Fields:

- Customer ID
- Customer Name
- Mobile Number
- Email
- Address

Order Form

Fields:

- Order ID

- Customer Name (Lookup)
 - Product Name (Lookup)
 - Order Date
 - Quantity
 - Total Amount
 - Payment Status
 - Order Status
-

Step 3: Add Automation

- Automatically generate Order IDs.
 - Calculate the total order amount.
 - Reduce product stock after each successful order.
 - Mark products as **Out of Stock** when inventory reaches zero.
 - Display order confirmation.
-

Step 4: Create Reports

Generate reports for:

- Product List
 - Available Stock
 - Customer Details
 - Order History
 - Sales Report
 - Out-of-Stock Products
-

Step 5: Test the Application

- Add sample products.
 - Register customers.
 - Place product orders.
 - Verify stock is updated correctly.
 - Check generated sales reports.
-

Result

A **Cloud-Based Product Selling System** was successfully developed using a **Software as a Service (SaaS)** cloud platform. The application enables customers to purchase products online, allows administrators to manage inventory and orders efficiently, and provides automated workflows, centralized cloud storage, real-time updates, and comprehensive sales reporting, demonstrating the practical implementation of the **SaaS cloud computing model**.
