

Exp no 2 :Property Buying & Rental System (Chennai City) using SaaS

Aim

To develop a **Cloud-Based Property Buying & Rental System for Chennai City** using a Cloud Service Provider (such as **Zoho Creator, Google AppSheet, Microsoft Power Apps, or Salesforce**) to demonstrate the **Software as a Service (SaaS)** model. The application enables users to list properties, search available properties, buy or rent properties, manage customer information, and generate reports through a secure cloud-based platform.

Procedure

1. Sign in to a cloud platform (e.g., Zoho Creator).
2. Create a new application named **Property Buying & Rental System**.
3. Design forms for Property Owners, Properties, Customers, and Transactions.
4. Add property details such as location, property type, price/rent, and availability.
5. Create customer registration and inquiry forms.
6. Develop a booking/request form for buying or renting properties.
7. Configure workflows to automatically generate Transaction IDs and update property availability.
8. Create reports to display available properties, sold/rented properties, customer details, and transaction history.
9. Test the application using sample data from different locations in Chennai.
10. Deploy the application on the cloud and access it through a web browser.

Implementation

Step 1: Create the Application

- Log in to the cloud platform.
- Create a new application named **Property Buying & Rental System – Chennai**.

Step 2: Create Forms

Owner Form

Fields:

- Owner ID
- Owner Name
- Mobile Number
- Email Address
- Address

Property Form

Fields:

- Property ID
- Property Name
- Owner Name (Lookup)
- Property Type (Apartment, Villa, House, Plot)
- Purpose (Buy/Rent)
- Location (Chennai Area)
- Price / Monthly Rent
- Number of Bedrooms
- Availability Status

Customer Form

Fields:

- Customer ID
- Customer Name
- Mobile Number
- Email
- Preferred Location
- Budget

Transaction Form

Fields:

- Transaction ID
- Customer Name (Lookup)
- Property Name (Lookup)
- Transaction Type (Buy/Rent)
- Booking Date
- Amount
- Payment Status
- Transaction Status

Step 3: Add Automation

- Automatically generate Transaction IDs.
- Update the property status to **Sold** or **Rented** after confirmation.
- Send booking confirmation notifications.
- Calculate the total transaction amount.

Step 4: Create Reports

Generate reports for:

- Available Properties
- Sold Properties
- Rented Properties
- Customer Details
- Transaction History
- Properties by Chennai Location

Step 5: Test the Application

- Add sample property owners.
- Register customers.

- Add properties located in Chennai.
- Perform buying and rental transactions.
- Verify that property availability updates correctly.
- View generated reports.

Result

A **Cloud-Based Property Buying & Rental System for Chennai City** was successfully developed using a **Software as a Service (SaaS)** cloud platform. The application enables property owners to list properties, customers to search and request properties for purchase or rent, and administrators to manage transactions efficiently. The system provides centralized cloud storage, real-time updates, secure access, automated workflows, and report generation, demonstrating the practical implementation of the **SaaS cloud computing model**.
